Subject: Call For Nominations: ACM Transactions on Knowledge Discovery from Data (TKDD) Editor-in-Chief

To: <haixun.wang@instacart.com>

Dear Members of the Nominating Committee and the TKDD Community,

I am deeply honored to be considered for the position of Editor-in-Chief (EiC) of the ACM Transactions on Knowledge Discovery from Data (TKDD). Building on my academic and research experience, I envision a future for TKDD that continues to uphold its esteemed status as a premier archival source for knowledge discovery and data analysis.

1. Advancing Research Excellence: My primary goal is to maintain and enhance the journal's reputation for publishing outstanding research and developments in the field. I intend to encourage contributions from diverse areas of knowledge discovery, ensuring that TKDD continues to showcase innovative research on scalable algorithms for data mining, real-time data stream mining, multimedia analysis, and more.

2. Fostering Interdisciplinary Collaboration: In today's data-driven world, knowledge discovery transcends disciplinary boundaries. I aim to promote interdisciplinary collaboration by encouraging submissions that explore the intersection of data mining with fields like computational linguistics, machine learning, and cybersecurity. This approach will broaden TKDD's scope and relevance.

3. Embracing Emerging Technologies: The landscape of data analysis is continually evolving with the advent of new technologies. I will work to keep TKDD at the forefront of these developments, welcoming research on emerging trends such as deep learning, natural language processing, and data privacy, which are increasingly vital in the data mining community.

4. Encouraging Ethical and Responsible Research: As data mining technologies advance, ethical considerations become paramount. I pledge to ensure that the journal maintains a strong commitment to ethical research practices and addresses issues related to data security and privacy, promoting responsible data mining approaches.

5. Diversifying Editorial and Reviewer Base: A diverse perspective is essential for the growth of any journal. I will actively seek to diversify the editorial board and reviewer pool to include experts from various backgrounds, ensuring a fair and comprehensive review process.

6. Supporting Early-Career Researchers: Nurturing the next generation of data scientists is crucial. I will explore initiatives to support and mentor early-career researchers, offering them guidance and opportunities to contribute to TKDD.

In conclusion, I am excited about the opportunity to serve as the Editor-in-Chief of TKDD and to contribute to the advancement of knowledge discovery from data. I am committed to maintaining the journal's high standards, fostering collaboration, and embracing emerging trends while upholding ethical principles in research. With the support of the TKDD community, I look forward to steering the journal toward a future of continued excellence.

Thank you for considering my vision for the future of TKDD.

Sincerely,

Dr. Aytuğ Onan
